

Express Connect

Supercharge your copper connection

Through clever use of existing technology and infrastructure, Express Connect supercharges copper connections to create a great solution for businesses requiring a cost-effective, faster network that won't see them waiting for a lengthy installation.

What are the benefits?

- Minimal outlay and low monthly costs
- Quick installation
- Uncontended access
- Substantial improvement in connection speed
- 'Quality of service' that allows prioritisation of data or voice traffic
- Industry-leading service level agreements (SLAs)
- Symmetrical – upload and download at the same high speed
- Upto 10Mbps upload and download speeds
- Potential savings of up to 65% against leased-line costs
- Ideal for the creation of an MPLS network for smaller, multi-site companies
- Guaranteed, greater speed allows for more productive home workers

No one knows better than the successful business owner that time means money. The wait for a complex infrastructure required by more advanced solutions can be detrimental to your business. We can have your new connection up and running quicker than any other dedicated connection, allowing you to focus on running your business.

How does it work?

Express Connect uses Ethernet first mile (EFM) technology to deliver a high speed, reliable internet connection, of up to 10Mbps, to your business. Unlike traditional leased-line services that use a single copper cable, EFM is delivered via multiple copper wires, creating a more robust and stable connection meaning lower costs, higher resilience and a shorter installation time. Speeds are symmetrical and uncontended so, unlike a broadband connection, you get the same speeds uploading data as you do on the download and you do not share your bandwidth with other users.

Is it available for my business?

Recent research indicates that around 60 per cent of British businesses are located in an area that could currently benefit from Express Connect. Our Datasharp Optimum Connect experts will be able to tell you if it is available for you.
