

Fibre Connect

Connection without compromise

When productivity is the key concern for your business, you need to know you are benefiting from the best, most efficient and reliable connection available.

What are the benefits?

- An uncontended connection that is dedicated to your business
- Highly scalable
- Futureproof
- Super-fast
- Reliable and resilient
- Backed up by our industry-leading service-level agreements (SLAs)
- Ideal for running an MPLS network, connecting companies that have multiple sites
- Centralisation of all services – voice, data and internet
- Guaranteed high speed allows for more productive home workers
- 'Quality of service' allows you to prioritise data or voice traffic
- Symmetrical – upload and download at the same high speed

How does it work?

Unlike a traditional leased-line service that uses a single copper cable to connect you to your local exchange, Fibre Connect harnesses the power of fibre-optic cabling to supply data at the speed of light, creating the most robust and stable connection for your company's network. This, coupled with our industry-leading SLA, means you get a service that is entirely dedicated to helping your business function at full speed.

Is it available for my business?

Yes. Datasharp Optimum Connect has a massive nationwide footprint and our experts can determine the best bespoke solution for your business. If you have fibre close enough to your premises, we can determine the process of getting a fibre cable to you and explain what will be involved.
